Looking for Eligible Care Facilities

LifeZig

We are expanding our new free LifeZig reminiscence therapy program to create personalized video channels for individuals with Alzheimer's Disease or other dementia who receive care from eligible day-care, long-term-care, and other care-providing facilities in the Bay Area.

Through your facility, we meet with clients/residents and their family caregivers to create personalized reminiscence video channels (slideshows with music) that play on the LifeZig system. The personalized reminiscence videos are created on-site, and are based your client's own photographs and music (e.g. lifetime events, family, and other cherished memories) and play on the LifeZig system.

Your client or residents will watch their channels weekly at your location for approximately six months. Participating in these weekly sessions may help to improve their mood and behavior and serve as a pleasant event and activity.

This study, all necessary equipment, and personalized reminiscence video channel preparation is offered free of charge, and is funded by the National Institute on Aging (part of the National Institutes of Health).

Compensation will be provided to qualified participants. An optional free DVD with a copy of their personalized digital photo album and slideshow video is available for participants/families at the end of the study. No travel or cost is involved.

If you would be interested in learning more about offering this new free program to your clients/residents at your facility, please contact us. A minimum of 6 participants is needed from each facility to start the LifeZig sessions and a family member or other caregiver who is in contact with individual must be available to participate.

Participants will follow one of these therapies: Personalized Video (LifeZig), Reminiscence Video for Dementia, and Traditional Care.
